Zoll-Dental Zator®

Zoll-Dental Zators®

Zoll Price **\$74.50** No Trade-In

Try a new Zoll-Dental ZATOR®. Zoll-Dental has taken our line of Luxating Type Elevators and coated them with Titanium Nitrite to make a slicker and easier to use Luxating Type Elevator. This tips also help to retain sharpness longer than standard stainless steel tips. Once these instruments wear they can then be re-tipped for the same price as a regular elevator!

Try a ZATOR® today!

### Zoll-Dental's Zator® "ZP" Series

Zoll-Dental's Zator® "ZP" series is a series of instruments that are used for A-Traumatic extractions. These 15 instruments are used when one wants more strength than a standard periotome. All of these instruments are coated with titanium nitride for two reasons. The first is for edge retention but the second and most important reason for the coating is that it creates a very slick surface. This slick surface creates less friction when using it to extract, less friction means less resistance which leads to smoother extractions. Use these instruments until they are dull and then instead of buying a whole new instrument they can be retipped for a nominal fee. Zator® ZP's can be purchased separately or in kits of 5, 10 or 15 pieces in a cassette!

## Crown Lengthening Kit (ZKIT-CLK)

Crown lengthening is performed to expose a greater height of tooth structure for better prosthetic restoration. This is done by incising the gingival tissue around a tooth. After temporarily displacing the gingival tissue a predetermined amount of alveolar bone is removed. The Zoll-Dental Crown Lengthening Kit contains one of each instrument listed below in a sterilization cassette. All of these instruments can be purchased individually but the kit provides a 10% discount over buying them separately.

## Zoll-Dental Periotomes & Periotome Sets.

These kits are the various sets of Periotomes that Zoll-Dental makes available in kit form with a cassette. Kits can have two, five or seven periotomes in them. They can be had in a number of different handle styles.

### Zoll-Dental Kurtzman Periotomes

Titanium Coated To Ease Insertion & Preserve Sharpness!

The Kurtzman Periotomes by Zoll-Dental are used to cut the attachment to the tooth during extractions. Far less traumatic than traditional extraction methods Periotomes allow the tooth to exit the bone occlusally thus eliminating the problems caused by lateral movement. The Periotomes also help to lessen root fracture thus making for quicker and less problematic extractions. The Zoll-Dental Kurtzman Periotomes are coated with a Titanium coating for long instrument life and for a smoother instrument surface to ease insertion. The Kurtzman Periotomes have a slight flame shape to the head making them easier to insert than traditional blunted periotomes. The Kurtzman Periotomes are in the Featherweight® XL handle and are available either individually or at a discounted price for the set of two. The Kurtzman Periotomes are made entirely in the US.
